

LANDBASED FISHFARMING

INTAKE WATER

DISCHARGE WATER

INTAKE WATER:

Water quality is crucial for fish welfare, as well as for the quality and growth of smolt.

M Vest Water's NORWAPOL® solution filters out organic and inorganic substances (incl. removal of metals and humus) to extremely low levels, ensuring the very best living and growth conditions for the smolt.

Read more [here](#) about our green and highly efficient solution for the treatment and purification of the inlet water at Erko Settefisk AS's RAS plant at Stord, Norway.

INTAKE WATER

DISCHARGE WATER:

M Vest Water has with its NORWAFLOC® and NORWAPOL® technology achieved full removal of particles and phosphorus plus significant reductions in nitrogen levels in the discharge water.

These contaminants are major contributors to the pollution of the marine environment.

M Vest Water's technology thereby contributes to the aquaculture industry's goal of ensuring a more sustainable production.
